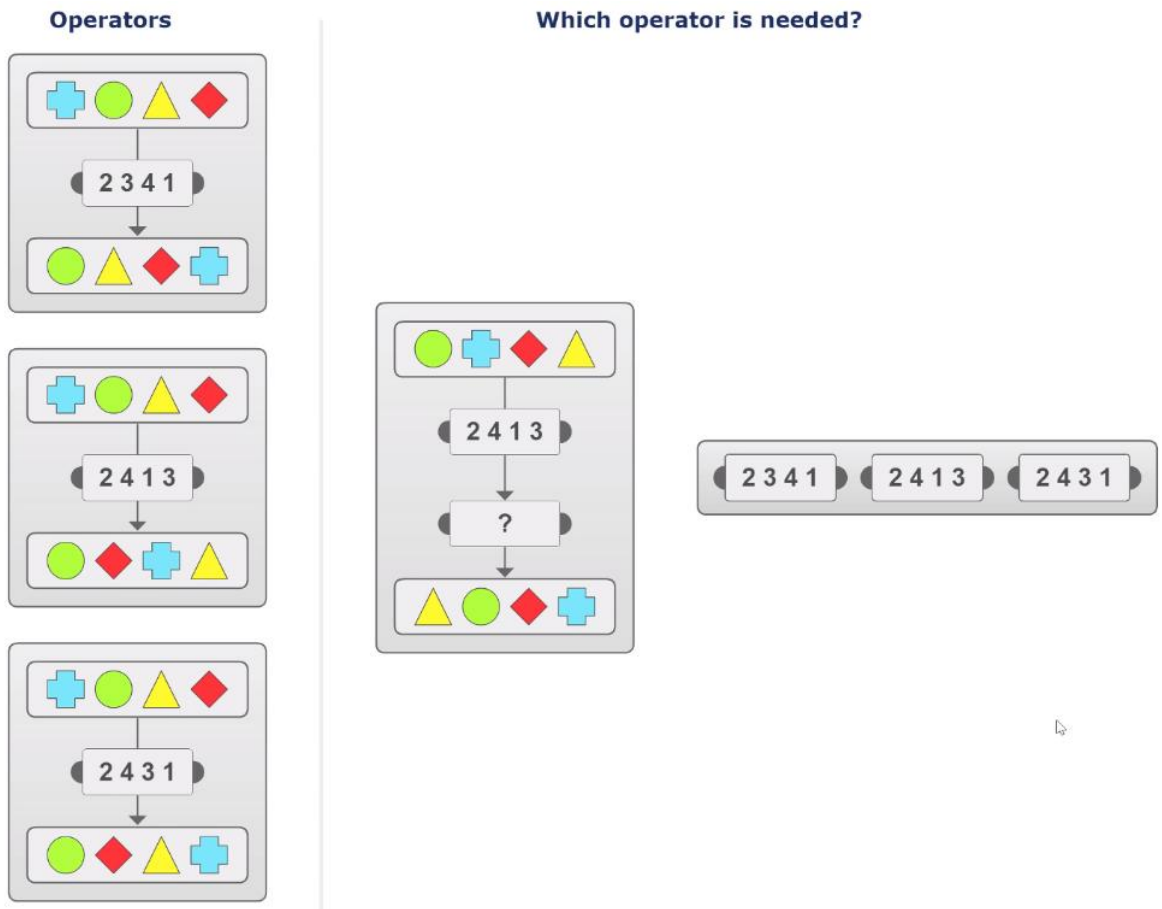
Capgemini Placement Papers - Sample Game-Based Aptitude questions

Q1. Which operator is needed?



Answer: 2341

Explanation:

From the given row,

Position 1 is occupied by a circle

Position 2 is occupied by a plus sign

Position 3 is occupied by a rhombus

Position 4 is occupied by a triangle

After 2413,

Position 1 is occupied by a Plus sign

Position 2 is occupied by a Triangle

Position 3 is occupied by a Circle

Position 4 is occupied by a Rhombus

In the final row, the order is **a triangle, circle, rhombus, plus sign** which can be translated as **2341**.

Q2. Pick the one that doesn't fit the group.

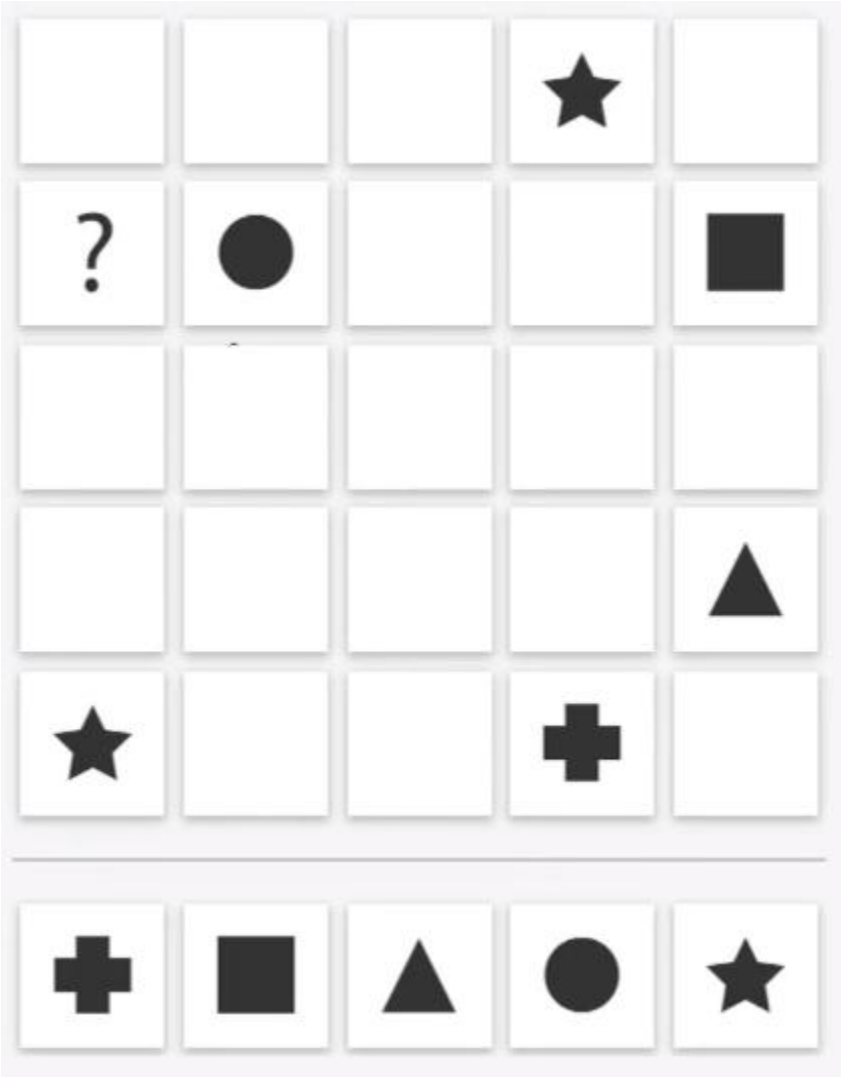
Answer: E

Explanation:

In each step, the shaded square moves 1 position in an anticlockwise direction along the sides of the outer square. In figure E, the shaded square should be along the top edge of the outer square. But it was given along the bottom edge of the outer square and hence the odd man.

Q3. Find the missing part

recruitmentindia.in



Answer:

Explanation:

Each row/ column should have all five shapes (triangle, plus sign, square, circle, star).

If we consider row 2, a star can be fixed only at grid 23. So, a plus sign can be fixed at the first column of the second row. So, the question should be replaced by a plus sign.

Q4. Enter the unique digits that satisfy the given equation.

_ × _ + _ = 45		
1	2	3
4	5	6
7	8	9
🗑		

Answer: 6 × 7 + 3 = 45
